Milestone 1 Getting set up (Suggested due date: 4/15) Proposal:

In this final project my partner and I want to make an Augmented Reality application. This gives a variety of around globe Endangered Animals available for viewing in 3D. The ultimate goal of this mobile application is to raise awareness and to make the majority of the public be involved in the fight against wildlife trafficking. If this issue doesn't get addressed now then there will be a lot of animals that will go extinct.
