Milestone 2 Prototype

Designs
- Cocopods
    - Have to download cocopods for our application to work
- Wildify (Waleed)
    - Base, controller and view controller of the App, believe it would take several days to test and run for the app to be able to run perfectly
- Pod folder (victor)
    - We believe "must have feature" would be images for the application to have a clean and sleek design.
    - Were also able to add videos in the application
    - This may take several days also depending what other features and information we have time and want to add
